Why implement a Managed CE Router Solution for your business with XLink?

XLink's Managed CE Router can provide your business with a managed, monitored and maintained onsite router solution.

As connectivity becomes a permanent feature of many business processes and activities, your business internet link shouldn't be kept at arm's length. There are many cost- and productivity-benefits to be gained, such as restricting access to time-wasting services and better security oversight such as firewall systems.

Creating such an environment by yourself is expensive and self-defeating. XLink's Managed CE Router solution can be tailored to any business environment. Whether you are a small operator needing a reliable internet connection or a large company wishing to connect multiple branches on a private network, it can scale to meet those requirements.

Understanding the challenges of a router managed solution for your business

Poor configurations

Costly investment

Employing **skilled security professionals**

Effectively **monitoring and managing threats**
