Why implement GSM Data Connectivity for your business?

XLink's GSM Data Connectivity solution is network agnostic and supports single and dual SIM configurations and is backed by XLink's market-leading one-stop support services.

Every business relies on a number of devices and machines to support services, process transactions, and monitor activities. This relationship is amplified in today's high tech world where connectivity enables faster, smarter and more reliable interactions with those devices. To resolve this problem, XLink has developed its GSM Data Connectivity solution, using SIM cards to keep devices connected at low costs, high support levels, excellent network redundancy and more.

Whatever the need, if it involves GSM connectivity with SIM cards, XLink can help. You gain insightful visibility and location management, all through intuitive portals. If something goes wrong, XLink's 24/7 call centre and a nationwide network of technicians can address the problems quickly and effectively. Above all, by supporting multiple networks there is failover if a connection drops, and the solution can be PCI compliant to meet financial transaction standards.

GSM Data Connectivity

Implementing GSM Data Connectivity securely connects your digital infrastructure through:

Mobile Operator Management
Network Management
SIM Management
Mission Critical Data

Some of the **features** of XLink's GSM Data Connectivity include:

- ✓ Need for network agnostic environment
- ✓ Failover option between multiple GSM networks
- ✓ Quick deployment
- ✓ Secure communication of data
- ✓ Can be remotely managed

XLink enables communication & control through **secure network systems** for the following applications:

We are connectivity orchestration experts. **How can we link you today?**
