

Connected Inventory Management

Optimise business processes with RFID powered Retail Solutions

Radio-frequency identification uses electromagnetic fields to automatically identify and track tags attached to objects. An RFID tag consists of a tiny radio transponder, a radio receiver and transmitter.

RFID is a **strategic technology tool** for redesigning business processes and optimizing traditional supply chain management, delivering real business improvement and offering efficiency, accuracy, visibility and security.

We are **connectivity** orchestration experts. How can we link you today? 08600 XLINK (95465) | sales@xlink.co.za | www.xlink.co.za
